FLT	Freightliner Terminal	T. or Term.	Terminal
		Tun.	Tunnel

Publisher's Note

Although situations are constantly changing on the railways of Britain, every effort has been made by the author to ensure complete accuracy of the maps in the book at the time of going to press.

Cover illustrations

Front: No at 334006 Glasgow Central,
11 April 2002.

Back, top: No 37418 at Cardiff Central,
17 January 2002.

Preface to First Edition

The inspiration for this atlas was two-fold; firstly a feeling of total bewilderment by 'Llans' and 'Abers' on first visiting South Wales four years ago, and secondly a wall railway map drawn by a friend, Martin Bristow. Since then, at university, there has been steady progress in drawing the rail network throughout Great Britain. The author feels sure that this atlas as it has finally evolved will be useful to all with an interest in railways, whether professional or enthusiast. The emphasis is on the current network since it is felt that this information is not published elsewhere.

Throughout, the main aim has been to show clearly, using expanded sheets as necessary, the railways of this country, including the whole of London Transport and the light railways. Passenger lines are distinguished by colour according to the operating company and all freight-only lines are depicted in red. The criterion for a British Rail passenger line has been taken as at least one advertised train per day in each direction. On passenger routes, to assist the traveller, single and multiple track sections with crossing loops on single lines have been shown. Symbols are used to identify both major centres of rail freight, such as collieries and power stations and railway installations such as locomotive depots and works. Secondary information, for example junction names and tunnels over 100 yards long, with lengths if over one mile has been shown.

The author would like to express his thanks to members of the Oxford University Railway Society and to Nigel Bird, Chris Hammond and Richard Warson in particular for help in compiling and correcting the maps. His cousin, Dr Tony McCann deserves special thanks for removing much of the tedium by computer sorting the index, as do Oxford City Libraries for providing excellent reference facilities.

June 1977

Preface to Tenth Edition

With this tenth edition and a period of 30 years since the author drew his first railway maps, this popular Rail Atlas can be said to have reached maturity! Over this period, there has been a number of major changes to the publishing arrangements, production methods, style and quality and more detail has been included.

Many external contributions have been received and the author would like to thank everyone who has helped, particular the individual who painstakingly cross checked every index entry against the maps. Further information and comments are always welcome. Please contact me through the publisher: Ian Allan Publishing Ltd, Riverdene Business Park, Molsey Road, Hersham, Surrey KT12 4RG.

It is also an appropriate time to consider what has happened to the network since the first edition in 1977. Most encouragingly, each edition has shown an expanding rail passenger network as well as the implementation of new light rail schemes. This latest edition shows new routes or the reopening of lines in England, Ireland, Scotland and Wales. Conversely, the number of freight terminals has fallen markedly, particularly with the sharp decline in the coal industry. Indeed, if it had not been for the author wanting to understand the complex South Wales freight network serving the many local collieries in the 1970s, this Atlas may never have been published. More recently, there have been some encouraging signs of the rebirth of freight, with several new facilities being brought into service.
