

Reprint – eine neue MIBA-Reihe! Dem vielfach geäußerten Wunsch (zumal der jüngeren unter unseren Lesern) folgend, haben wir uns entschlossen, Bauzeichnungen aus alten MIBA-Bänden wieder zu veröffentlichen. Freilich darf niemand erwarten, vollständige Bauanleitungen vorzufinden, vielmehr ging es uns darum, alle in den Jahren 1948 bis 1960 erschienenen Maßzeichnungen zusammenzufassen und so dem Eisenbahnfreund eine Übersicht der verschiedenen Loks und Waggons zu geben. Anspruch auf Vollständigkeit erhebt diese Sammlung ebenfalls nicht, wurden in den frühen MIBA-Jahren doch nicht alle Lok- und Wagentypen vorgestellt, sondern nur die, die zum jeweils behandelten Thema paßten.

Bei der Zusammenstellung mußten einige Kompromisse eingegangen werden; hier sei nur als Beispiel die Reihenfolge der einzelnen Zeichnungen genannt. Es war nicht möglich, die Lok-Baureihen numerisch zu ordnen, von 01 bis 99, zumal, wie oben erwähnt, nicht alle Baureihen damals erfaßt waren: Wir mußten indes eine Mischung vornehmen, so daß das Layout einigermaßen "aufging". Getrennt wurden die Zeichnungen dagegen in Dampflokomotiven, Elloks, Dieselloks und Dieseltriebwagen, Güterwaggons und Reisezugwagen.

Reprint deutet aber auch darauf hin, daß die Zeichnungen nicht neu angefertigt wurden (was den Preis enorm in die Höhe getrieben hätte), sondern mit kleineren "kosmetischen Korrekturen" direkt aus den alten MIBA-Heften abgenommen wurden.

Wie eingangs schon gesagt: Es wurden (fast) alle Zeichnungen nachgedruckt, die in den Jahren 1948–1960 erschienen sind. Die Einschränkung "fast" betrifft einige wenige Zeichnungen, deren Qualität für einen Nachdruck nicht ausreichte und die wir aussortiert haben.

Ein Wort noch zur Handhabung des "Reprint". Wir haben den Rücken nur leicht verkleben lassen, damit sich jeder Besitzer der Zeichnungssammlung ein Archiv nach seiner Vorstellung zusammenstellen kann. In der Kopfzeile auf jeder Seite findet man die Typenbezeichnung der Fahrzeuge, das Erscheinungsheft der jeweiligen Zeichnung und den Zeichnungsmaßstab. Das Format entspricht dem der MPM-Reihe; dadurch besteht – neben dem einheitlichen Erscheinungsbild – die Möglichkeit, die Bauzeichnungen auch in den MPM-Ordnern abzuheften, falls man sich nicht des speziellen Reprint-Ordners bedienen will.

Tiefladewagen

Erbaut um die Jahrhundertwende (vermutlich 1908). Seine ursprüngliche Gattungsbezeichnung war SSnl,
Eigengewicht 23,4 t, Ludegewicht bis 40 t (bei einem Achsdruck von 16 t). Die 6 losen Querträger konnten
— je nach dem Ladegut — oben oder unten befestigt werden. Als Spiegeltransportwagen erhielt er in
Längsrichtung ein hölzernes Bockgerüst zum Anlehnen und Befestigen der in der mittleren Versenkung
stehenden Glaskisten. Der Wagen war ursprünglich ungebremst (unsere Zeichnung), mag aber später noch
Druckluftbremsen erhalten haben.

Maschinen-Packwagen Masch Pw 4 ü

Bei den Maschinen-Packwagen handelt es sich um Spezialfahrzeuge, die in "gewissen" Dienstzügen mit großem Strembedarf (beispielsweise für Funkgeräte) mitgeführt wurden. Sie waren meist mit mehreren Diesel-Generator-Gruppen ausgerüstet, die in der Mitte des Wagens Aufstellung fanden. Der restliche Platz wurde weitgehend von Schalttafel, Zusatzaggregaten und Kabeltrommeln eingenommen. Das Vorbild unserer Zeichnung trug früher mal die Nummer Bln 105 546. Ob der Wagen heute noch die gleiche Nummer trägt, ist leider unbekannt. Der Wagen im Bild links ist "nur" ein Bruder und trägt auf dem Bild noch das taktische Zeichen des weiland OKM.

DB-Umbaudurdgangswagen AB 3ygeb. Zeichnungen in Ho-Größe mit 0-Maßen (H0-Maße in Klammern). Von den heutigen Wagenzeichnungen sind keine "Werkstattblätter" erhältlich. Herr Hettler hat übrigens u.a. auch eine ausführliche 0-Zeichnung der im letzten Heft gebrachten V 60.
